代码改变世界

第十課-Change Mirth Connect To Mariadb

随着接口部署数量和交互数据越来越多,原来基于Mirth Connect默认derby嵌入式数据库下运行越来越不能满足高性能、高可靠等线上刚性需求,故需要切换 Mirth Connect的运行后台数据库。

本节课,我们把Mirth Connect由derby嵌入式数据库切换到Mariadb数据库:

1.启动MariaDB数据库管理工具HeidiSQL,创建数据库

-- 创建 mirth 数据库

CREATE DATABASE IF NOT EXISTS `mirth`;

-- 赋予root用户远程访问权限

grant all on mirth.* to 'root'@'%' identified by '125353Ct';

FLUSH PRIVILEGES;

2.首先Mirth Connect驾驶舱备份所有信道到本地磁盘后,停止Mirth Connect服务,依次执行如下操作

2.1 本机下载MariaDB数据库的JDBC驱动MariaDB Connector/J 2.7.1版本: (https://mariadb.com/kb/en/mariadb-connector-j-271-release-notes/)

MariaDB Connector/J 2.7.1 Release Notes

2.2 把下载的mariadb-java-client-2.7.1.jar包拷贝到D:\Mirth\MirthConnect\server-lib\database目录,如图所示:

2.3 然后修改D:\Mirth\MirthConnect\conf\dbdrivers.xml文件,添加一条Mariadb的JDBC驱动信息:

```

2.4 打开D:\Mirth\MirthConnect\conf目录下的mirth.properties文件,修改配置如下:

```
🔚 mirth. properties 🖾 📗
      # options: derby, mysql, postgres, oracle, sqlserver
      database = mysgl
 72
      # examples:
 73
          Derby
                                          jdbc:derby:${dir.appdata}/mirthdb;create=true
 74
                                          jdbc:postgresgl://localhost:5432/mirthdb
          PostgreSQL
          MySQL
                                           jdbc:mysql://localhost:3306/mirthdb
 76
          Oracle
                                          jdbc:oracle:thin:@localhost:1521:DB
          SQL Server/Sybase (jTDS)
                                          jdbc:jtds:sqlserver://localhost:1433/mirthdb
 78
          Microsoft SQL Server
          Microsoft SQL Server jdbc:sqlservex://localhost:1433;databaseName=mirthdb

If you are using the Microsoft SQL Server driver, please also specify database.driver below
 79
      database.url = jdbc:mariadb://localhost:3306/mirth
 81
 82
      # If using a custom or non-default driver, specify it here.
 83
      # example:
      # Microsoft SQL server: database.driver = com.microsoft.sqlserver.jdbc.SQLServerDriver
 84
     # (Note: the jTDS driver is used by default for sqlserver)
database.driver = org.mariadb.jdbc.Driver 3
 85
 8.6
 88
      # Maximum number of connections allowed for the main read/write connection pool
 89
      database.max-connections = 20
 90
      # Maximum number of connections allowed for the read-only connection pool
 91
      database-readonly.max-connections = 20
 92
 93
      # database credentials
      database.username
                          =root
      database.password =125353Ct
```

database = mysql #因为MariaDB是mysql的一个分支,故这里配置必须设定为mysql,不能设定为MariaDB.

database.url = jdbc:mariadb://localhost:3306/mirth

database.driver = org.mariadb.jdbc.Driver

database.username =root

database.password =125353Ct

3.启动Mirth Connect服务

成功重启Mirth Connect后,打开HeidiSQL客户端,可以看到Mirth后台数据库已经自动初始化,进入Mirth Connect驾驶舱重新导入原先磁盘备份的信道即可。
